

# FRONT WHEEL ARCH LINERS

**Wheel arch liners**, also known as **inner fender liners**, are protective covers installed inside a vehicle's wheel arches. Typically made from plastic, rubber, or synthetic fabric, they serve several purposes:

- **Protect the wheel well** from dirt, debris, water, and road salt.
- **Prevent corrosion** and damage to body panels and internal components like wiring and suspension.
- **Reduce noise** from the road and tires.
- **Improve aerodynamics** in some vehicle designs.

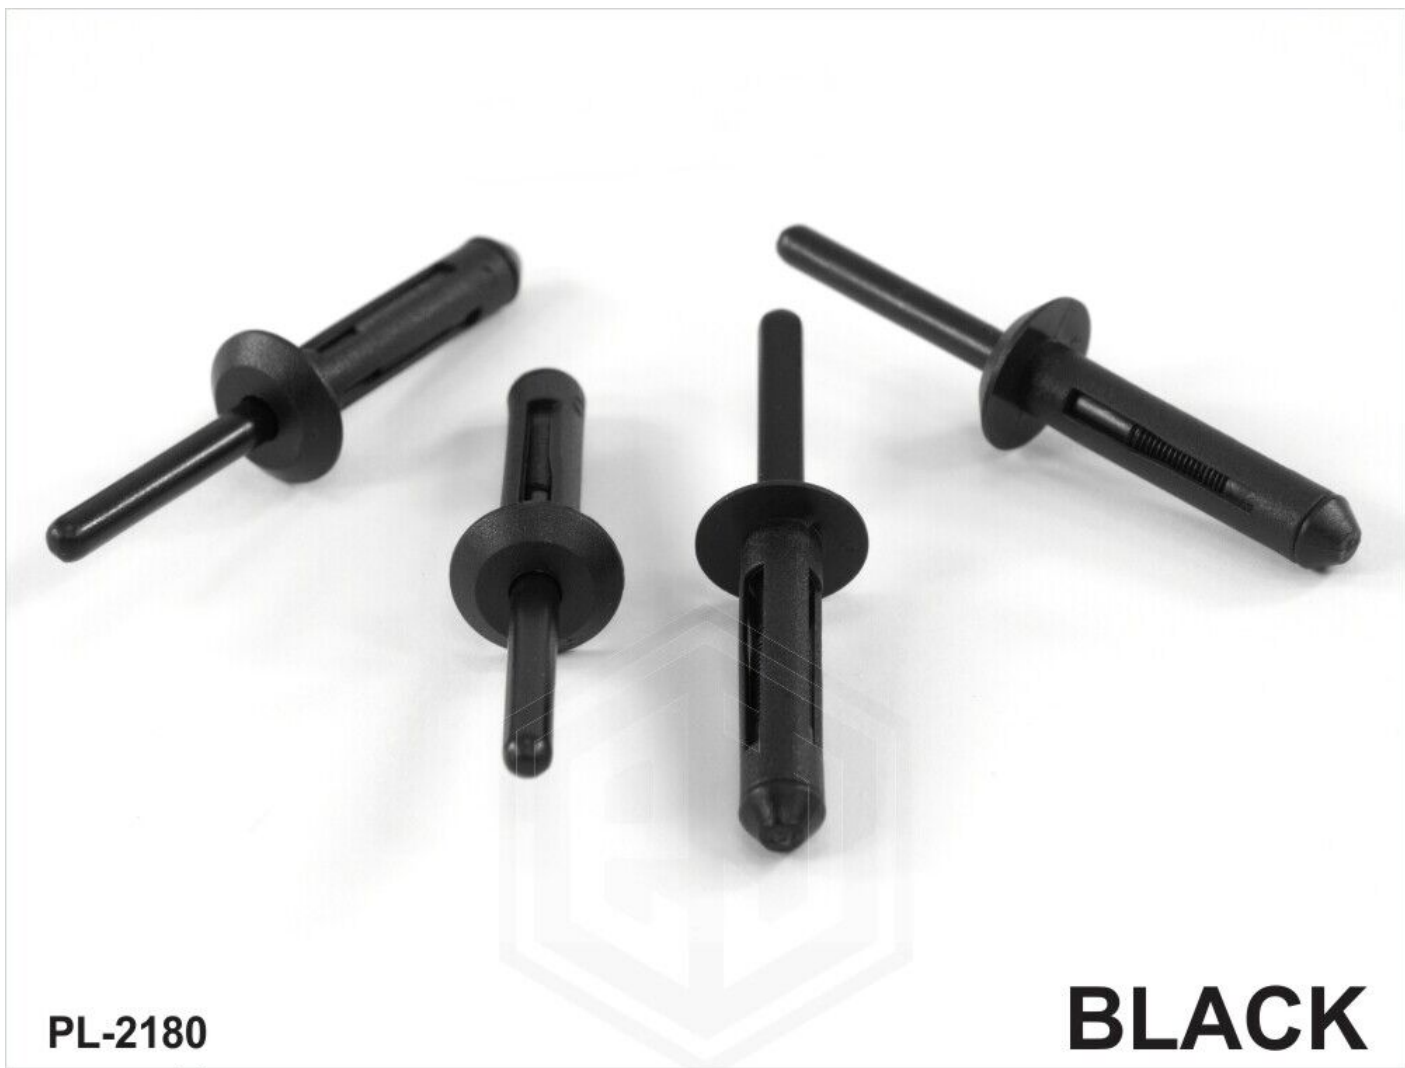

They are usually fitted between the wheel and the vehicle's bodywork and are found in both front and rear wheel wells.

# WHEEL ARCH LINER CLIPS

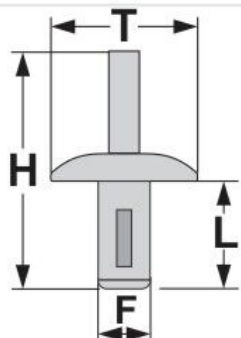

From my testing, I would recommend purchasing both 5mm and 6mm plastic clips. I have had good success with the two below

# 6mm Plastic Rivets

PL-2180

**BLACK**

- T - 13 mm
- H - 55 mm
- L - 27 mm
- F-Ø - 6 mm

**10x**

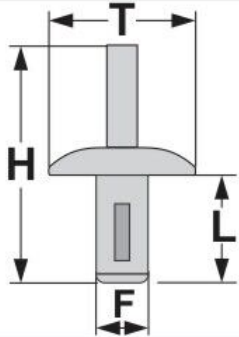

Press the image to purchase.

# 5mm Plastic Rivets

PL-2183

**BLACK**

T - 12 mm

H - 51 mm

L - 26 mm

F-Ø - 5 mm

**10x**
